

Name: _____

Stars and Planets Assessment

We have used the Orbital Charts to study the movement of planets compared to the apparent movement of the stars. Think about what you have learned and answer the following questions.

Circle the series of pictures (A, B, or C) that most accurately shows a planet throughout the year. The large circle represents a planet. An arrow is pointing to a planet in the first picture.

	January	May	October
A.			
B.			
C.			

Explain your choice and why you did not choose the other two answers.
Please use complete sentences.
