

1. You observed a variety of cells that are a part of the human body. Why do we have so many different types of cells?

- 2. The circulatory system is called the “transportation system.”
 - What does the circulatory system transport?
(Your answer should be more specific than “blood.”)
 - Where are these things transported to within the body?
 - Why?

3. Describe the path of blood throughout the circulatory system. You may use drawings to support your explanation.
